## KML Search Tool Activation Free

If you have a large number of KML or KMZ files that you wish to display in Google Earth, then KML Search Tool is the best tool to be used to search for the specified files in Google Earth. With this tool, you can be able to find any point within KML or KMZ file by entering a keyword and you can then preview the result in Google Earth. You can also export the result list to a CSV file for later use or you can set it to only display the latest file and the files from a specific folder. When installing this utility, you don't need to have any specific .NET Framework version; all you need is the .NET Framework 4 or later installed on your PC. After installing the app, you need to open it and then click on the "Open" button. After you have selected the file you want to search in, simply type the keyword you want to look for and then you can start typing the file name.
